

31 March 2020

Create multiple, simultaneous outputs or sensor reads incorporating use of a timer or `BlinkWithoutDelay`.

This week I am out of motivation and just plain tired. There is a huge amount of business law emails that I've been trying to get through since the class is now mainly covered through emails instead of lectures and trying to figure out materials for my sculpture class has been a

hassle. Deciding what to do for the weekly assignment put me at a loss so I just ran with the LDR controlling all three LED outputs following an interval.
